

Audio Boo- Web Based Audio Recorder-for Podcasting

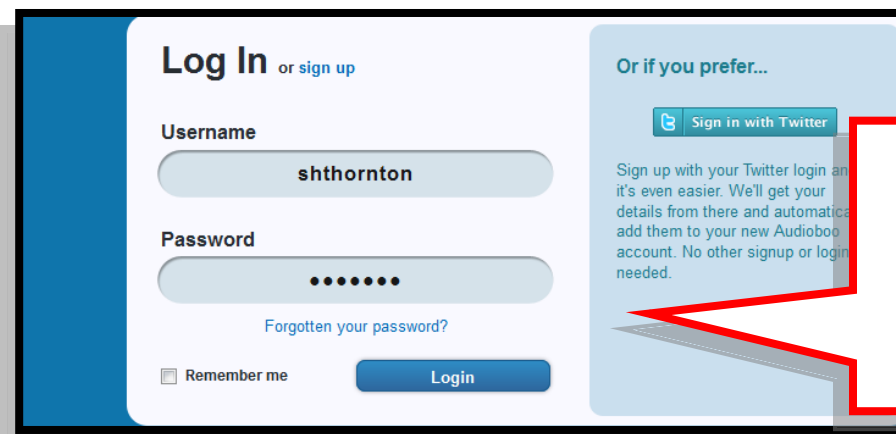

- Record, upload and get code for short audio files -5 minute maximum

It also has an app for the iPhone and Android **smart phones** for convenience.

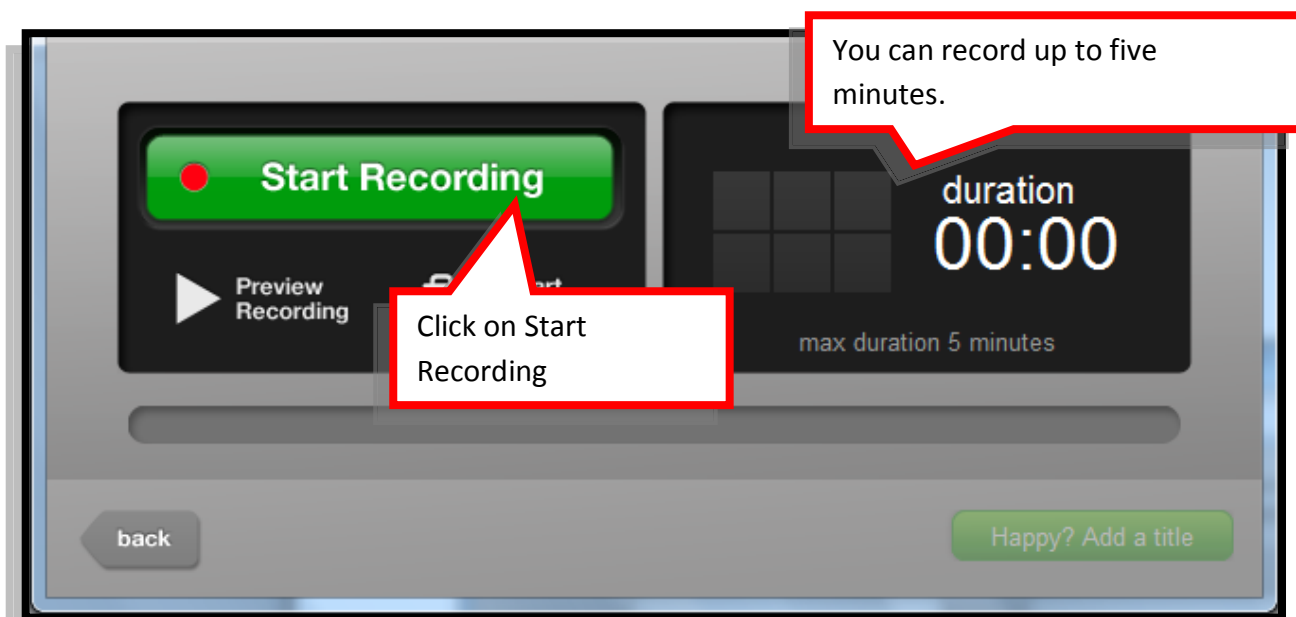

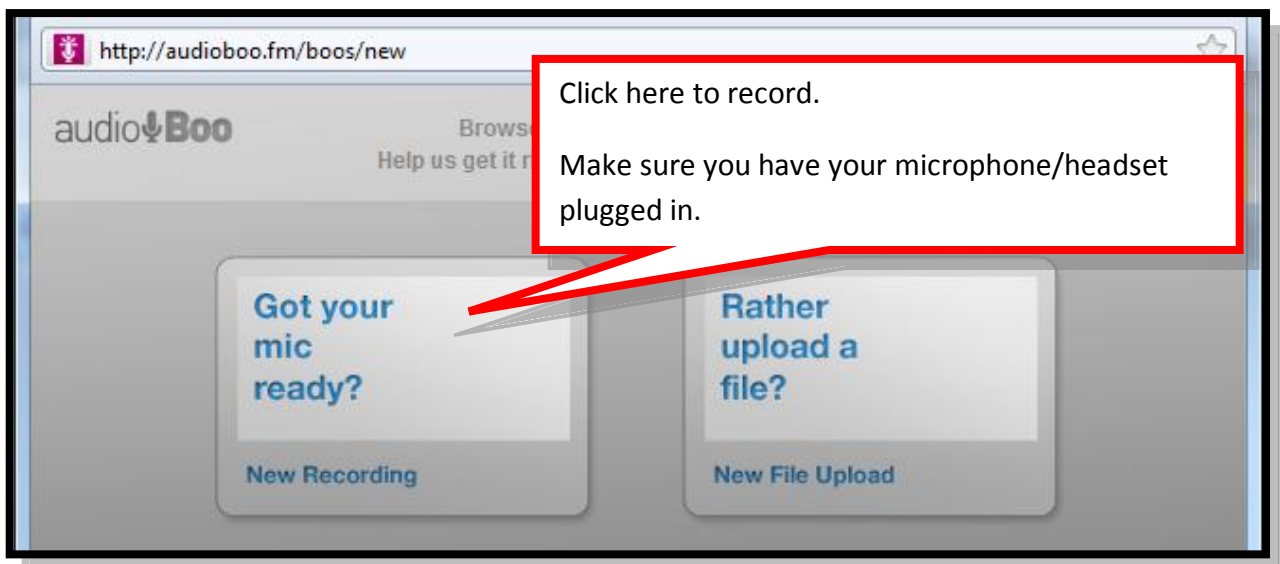

Sign up for a free account.

Watch a video introduction.

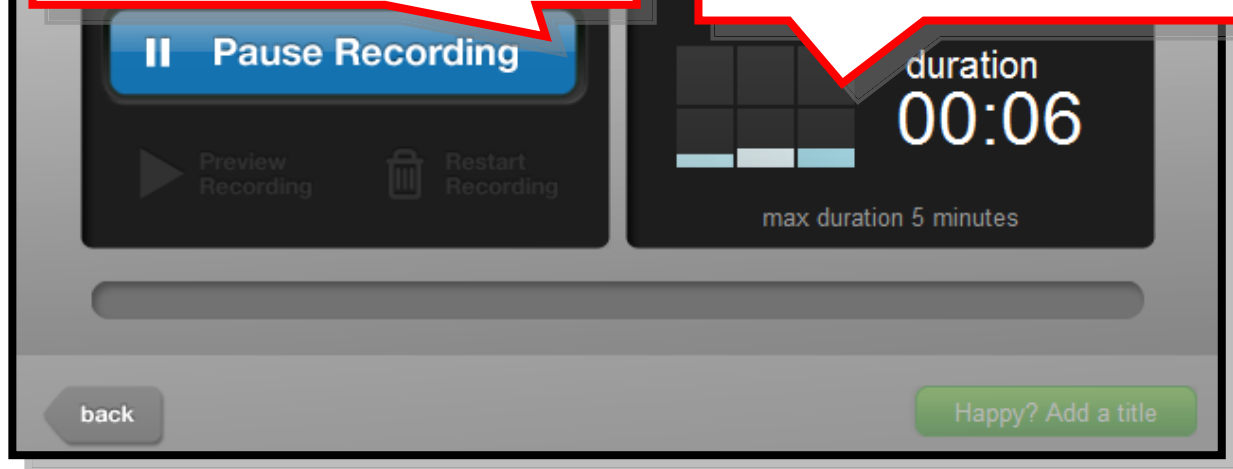

- Login to your account
- You can also sign in with your Twitter account if you have one.

Let's Record

You can click to pause the recording if needed. You also click here when you are finished.

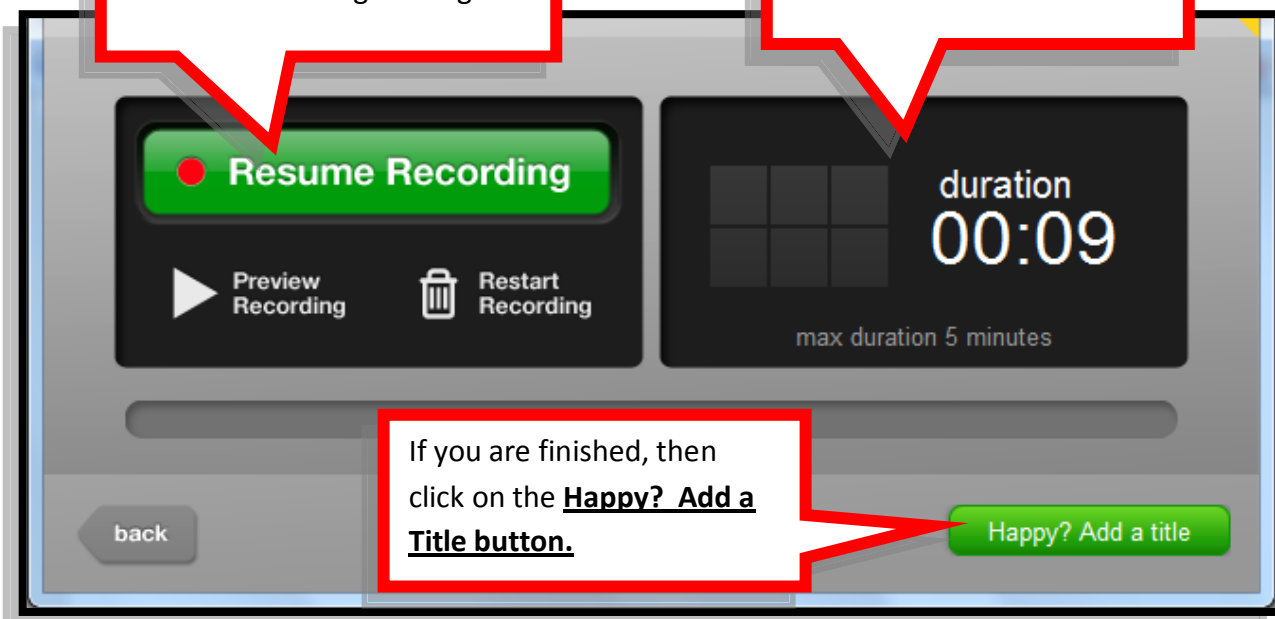

It tells you how long you have been recording. Maximize recording time is 5 minutes.

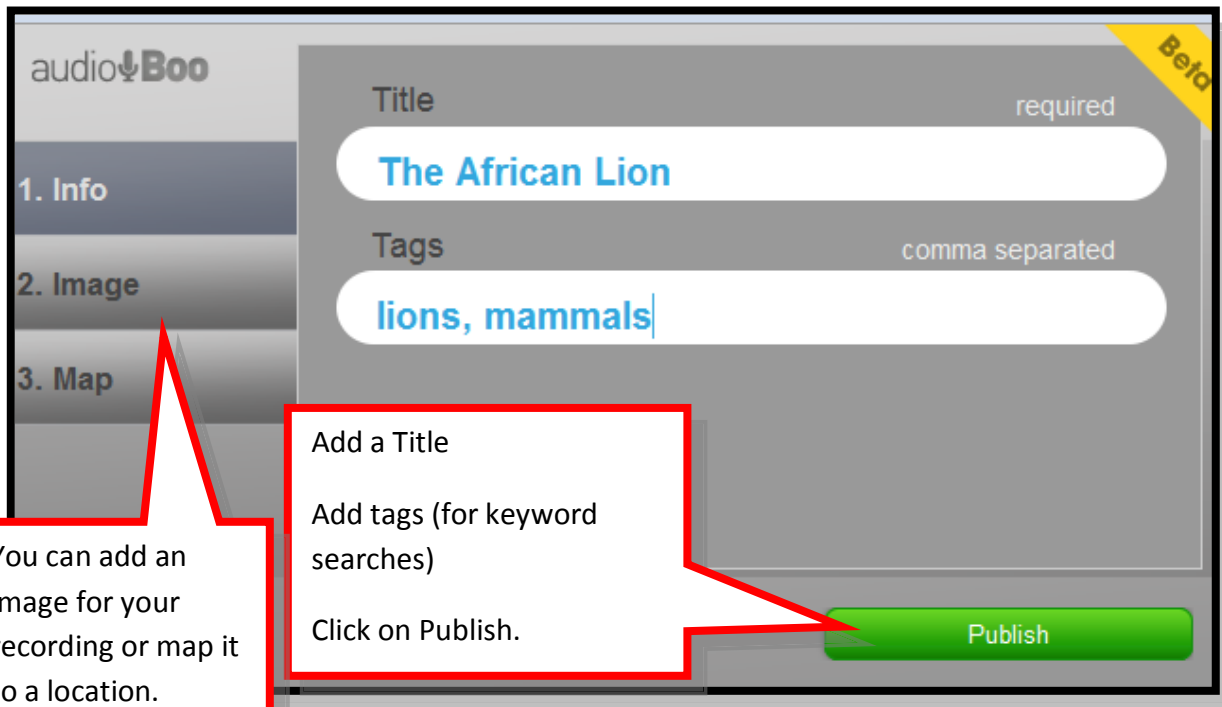

You can resume the recording or preview.

It also gives you the option to start the recording over again.

You can record up to 5 minutes so this tool has limitations.

If you are finished, then click on the Happy? Add a Title button.

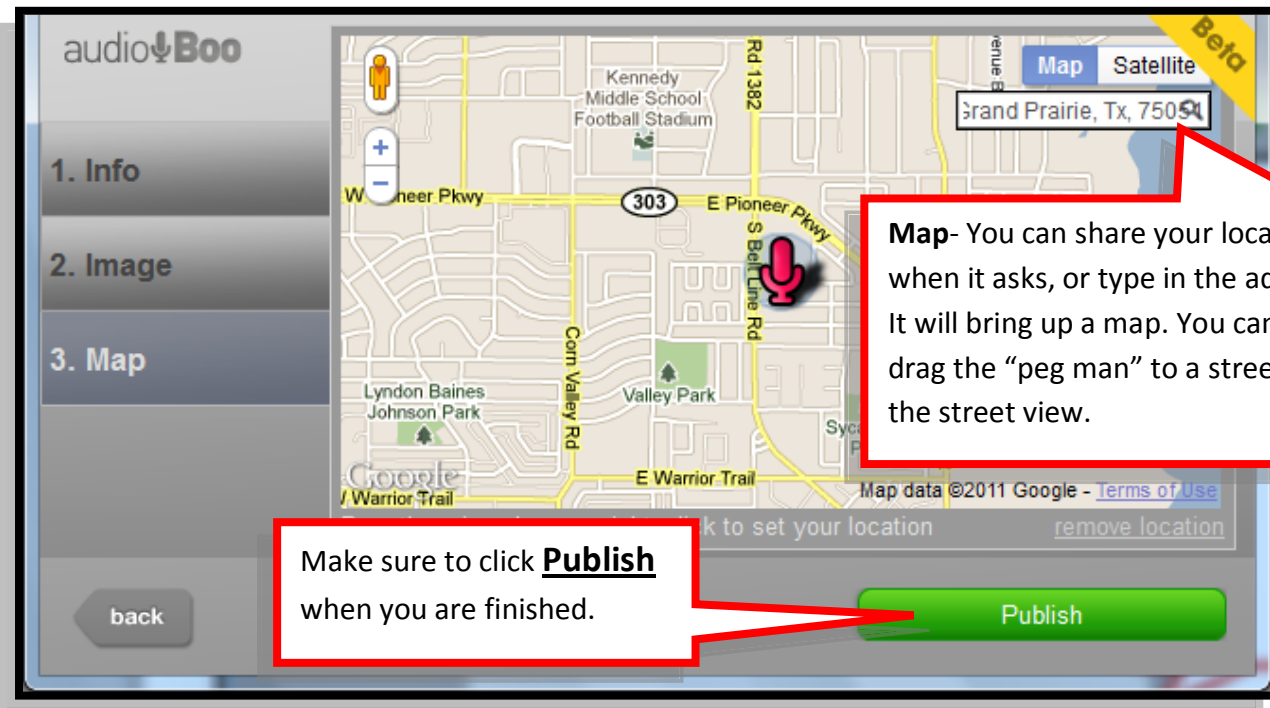

You can add an image for your recording or map it to a location.

Add a Title

Add tags (for keyword searches)

Click on Publish.

Map- You can share your location when it asks, or type in the address. It will bring up a map. You can also drag the "peg man" to a street to see the street view.

Make sure to click **Publish** when you are finished.

Saving your boo...

Click on the [here](#) hyperlink and it will take you to your Audio Boo recordings account where you will see your new recording.

Awesome, thanks for the boo. After a bit of processing you'll be able to find [here](#)

Click on the pencil to edit this recording.

Your other recordings will be on the right hand side.

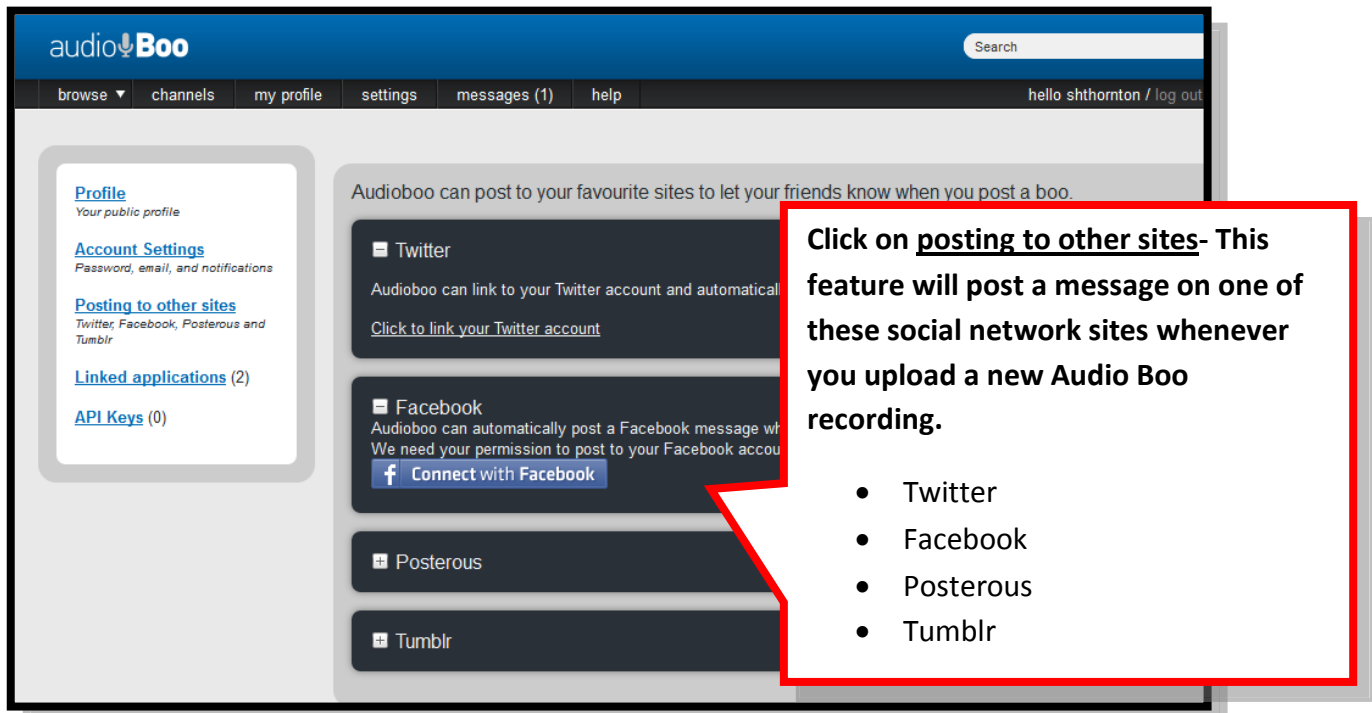

Settings: Your Profile

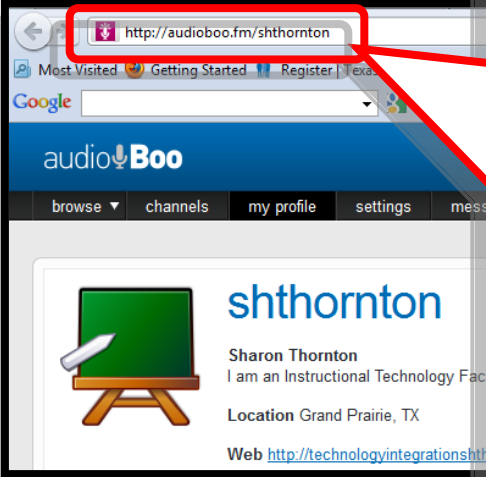

- One way you can share recordings automatically to a social networking website:

Sharing your website Vs. Podcasting with Audio Boo

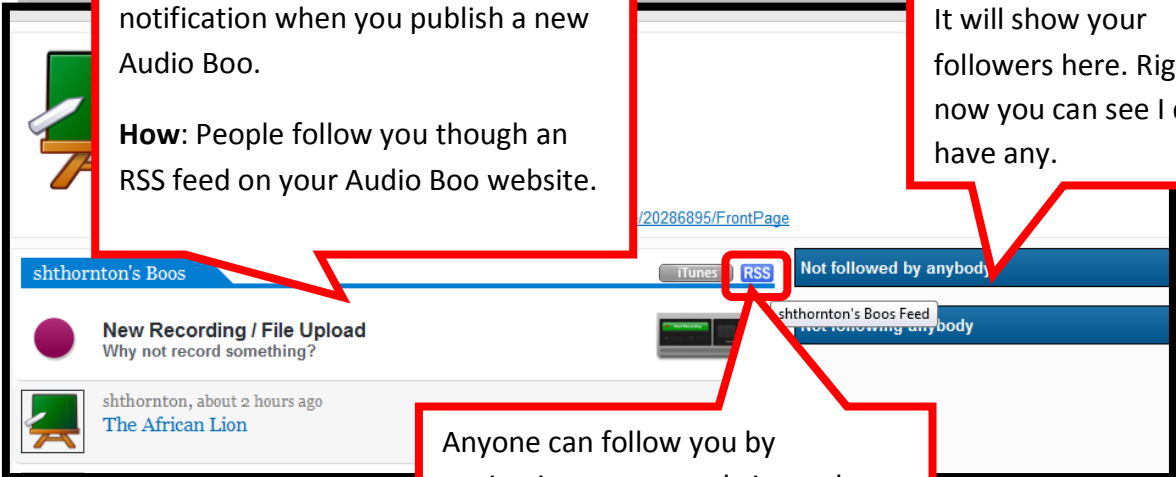

You can just **share the website address** via email, or post it on your blog, wiki or website.

Your Audio Boo website address is Audioboo.fm/username.

Example: <http://audioboo.fm/shthornton>

Note: viewers will not receive notification when you Publish a new audio Boo, but they will see all of your recordings if they go to your Audio boo website.

- Since all recorded or uploaded audio is available as a full Podcast Feed, others can follow your Audio Boo.

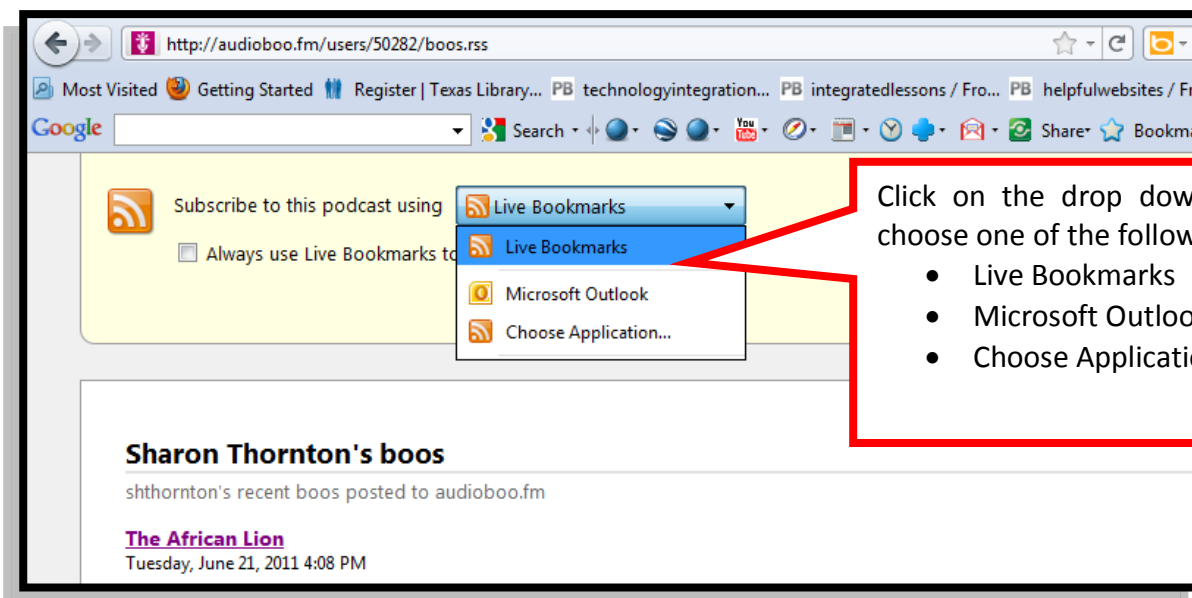

Podcast- Subscribers receive notification when you publish a new Audio Boo.

How: People follow you though an RSS feed on your Audio Boo website.

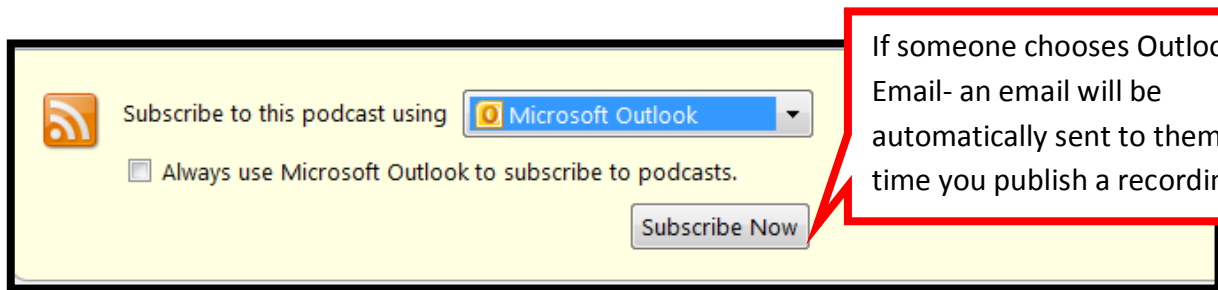

It will show your followers here. Right now you can see I don't have any.

Anyone can follow you by navigating to your website and Clicking on the **RSS feed button**.

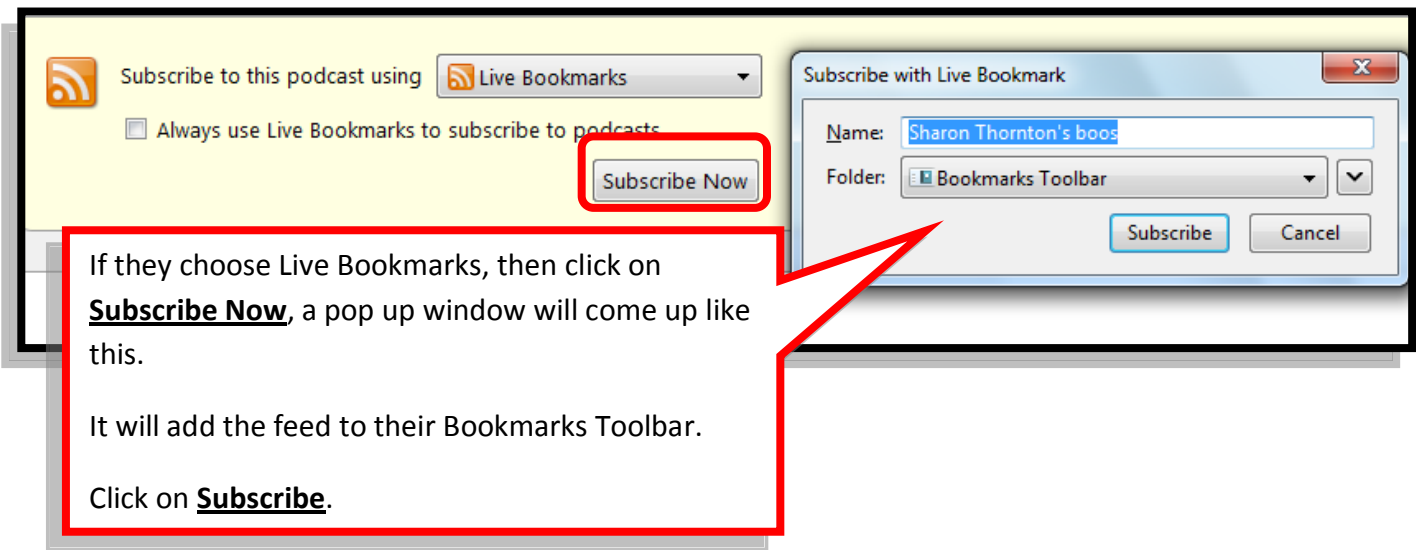

Click on the drop down arrow and choose one of the following:

- Live Bookmarks
- Microsoft Outlook- Email Feed
- Choose Application

If someone chooses Outlook Email- an email will be automatically sent to them each time you publish a recording.

If they choose Live Bookmarks, then click on **Subscribe Now**, a pop up window will come up like this.

It will add the feed to their Bookmarks Toolbar.

Click on **Subscribe**.

- **From Audio Boo Website**

You can use Audio Boo for:

[Impromptu interviews](#) that you can put on your website, [ambience](#) that just sound wonderful, [music](#) you've made yourself, a [record](#) of your children growing up or even a full blown [radio show](#). You can use it for [reporting](#), for [story-telling](#), educational use or [quick tips](#). *it as your audio digital archive, your web connected dictaphone or simply a great way to let your friends know what you're up to.*

Audioboo works on iPhone, Android and Nokia devices, and you can also record via the web. Soon we'll be adding Blackberry and Windows Mobile. Our mission is to be the one platform you use when you want to record audio, share it or keep it safe for the future.
