	(Each Group member should introduce themselves (on c	camera). The last group rite your introduction below. out them inside parenthesis so

## **Example introduction:**

Hello my name is Mr. S.(camera shift to the left) My name is Mrs. Smith, (camera shift to the left) and My name is Mr. Buck. In today's episode of Technology for Kids we will be showing you how to edit a movie using Microsoft Movie Maker. Movie Maker is a piece of software that makes it easy to put together video clips that were taken at different times to make a movie. (Camera off)

This is where you will sign off for your episode. It is a good idea to restate your names and have someone tell the audience what happened in your episode. It is also nice to include a teaser for what is to come in the next episode.

## **Example Outro:**

Outro:

(in the computer lab) Today we covered how to import video clips to a Movie Maker project, and then piece those video clips together in the story board section of the software. Make sure that you tune in next time when we kick our video up a notch by adding effects and transitions. That is all we have for today's episode of Technology for Kids for my partners Mr. S (camera shift to right), and Mrs. Smith(camera shift to the right again), I'm (camera panning back to me)Mr. Buck and we'll see you in the computer lab.
